

Do you have a piggy bank?

So what do you do with your money? Do you spend it all on toys, games, CDs, or clothes? Or do you save it?

Saving is very important. It helps you grow your money. If you save just one dollar a week for a year, you would have \$52 dollars at the end of the year.

You can save your money in a piggy bank or in a special savings account at your parents' bank. Count your money every once in a while, so you can see how your money is growing.

So the next time you get some money, pay yourself first. Put a little bit in your savings account or your piggy bank, and watch it grow!
